Filtration

Sand

Warwick Salt Filtration Sand is composed of whole-grain crystalline silica of great hardness and irreproachable whiteness.

They are durable and dense, which allows them to resist degradation. Each size is washed, dried and filtered according to a very strict quality control process.

Warwick Salt Sand is suitable for use in pressure and density filters. It can also be used in swimming pool filters, in various industrial processes and in auxiliary applications.

silica: Prolonged or repeated inhalation may cause silicosis. Avoid inhaling.
